Part List

Part	Part Image	Description	Quantity
#1		Pole 1	8
#2		Pole 2	9
#3		Pole 3	14
#4		Pole 4	2
#5		Pole 5	2
#6		Pole 6	2
#9		Cover	1
#10		Screw	1 Bag(s)
#11		Tool	2
#12		Stake	18
#13		Glove	2 Pair(s)
#14		Manual	1
#15		Screw Cap	22
#16		Pole Plug	10
#17		Rope	4

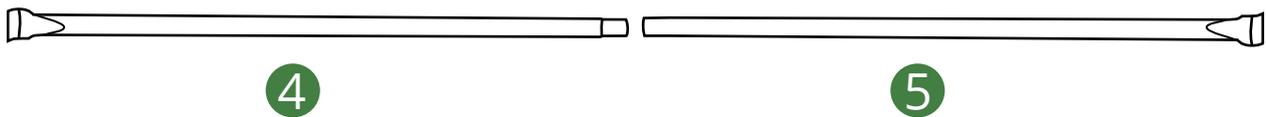

Assembly Instruction

• Steel Pipe

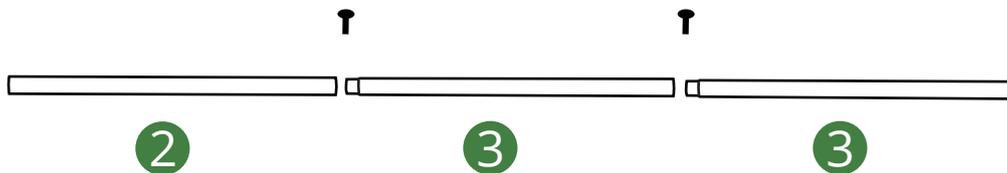

I . Assemble five curved supports with **longer** bolts (Insert for preliminary fixation only, and tighten later).

II . Assemble two floor supports with **shorter** bolts.

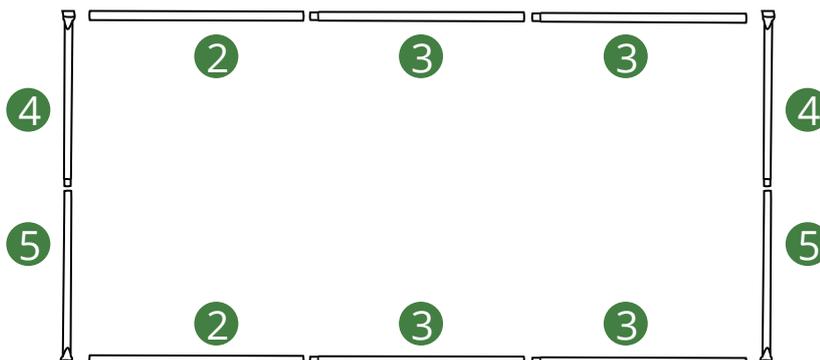

III . Assemble two horizontal supports with **longer** bolts (Insert for preliminary fixation only, and tighten later).

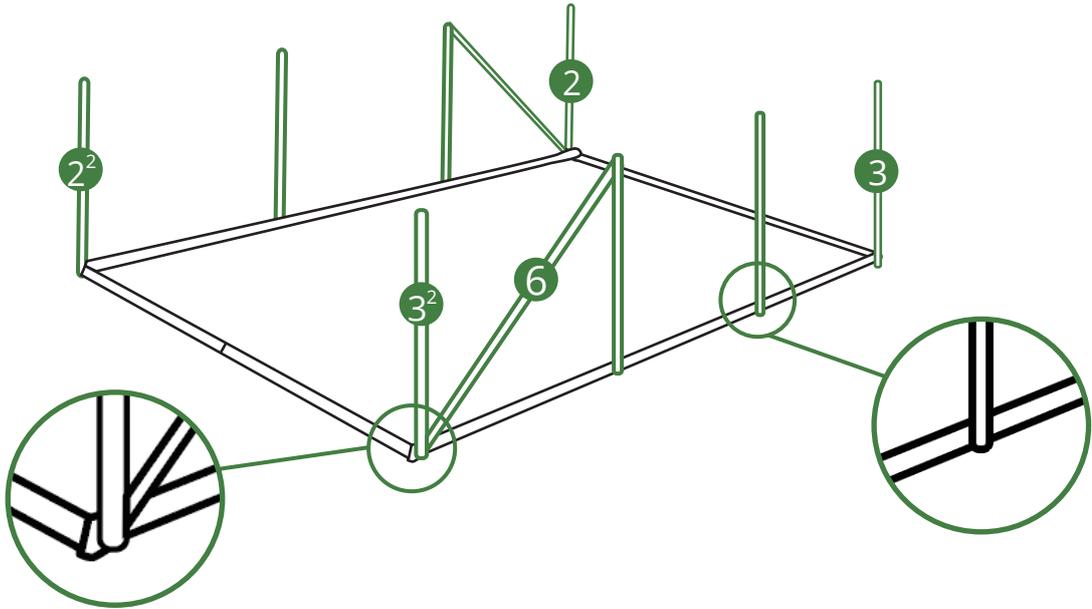

• Frame

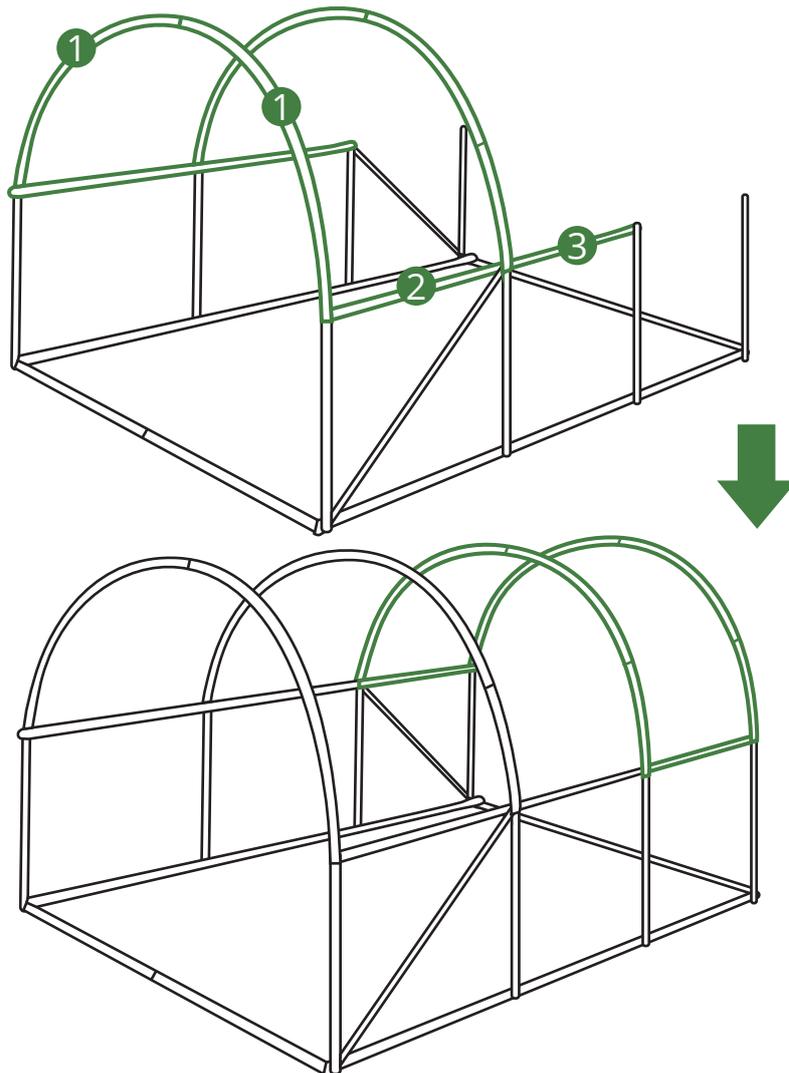

Step 1: Put two floor supports(short) and two horizontal supports¹(long) together.

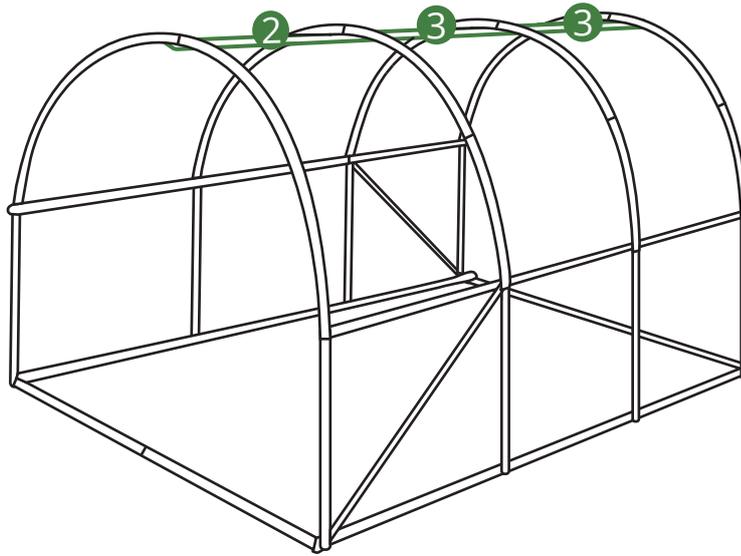

Step 2: Assemble the vertical supports² and two **diagonal supports**³ with the bottom frame.

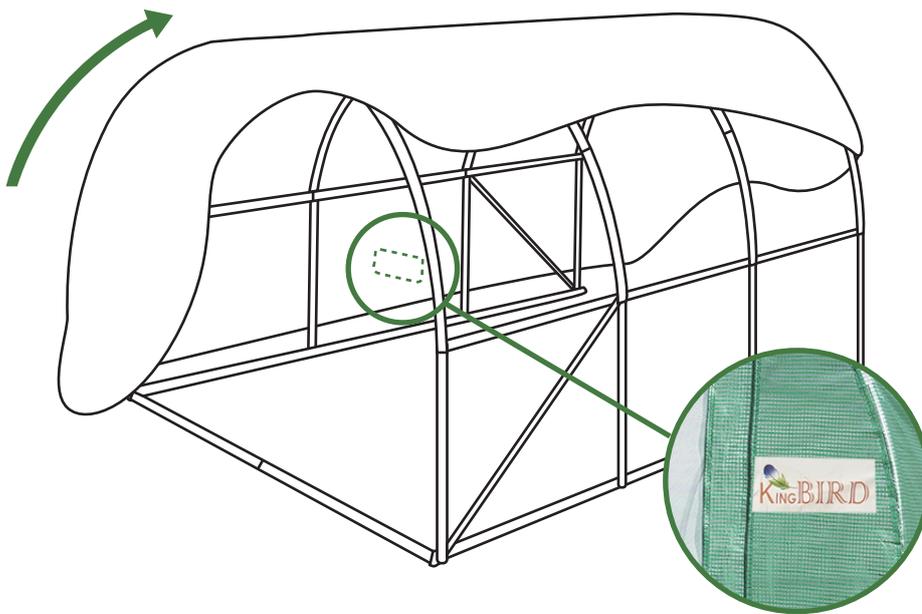

Step 3: Put two sections of horizontal supports on the 2nd tier of both sides first, then the curved supports. Successively assemble the rest of horizontal and curved supports.

Step 4: Assemble the rest of horizontal supports to the curved supports.

Step 5: Pull part #9 cover⁴ over the frame. Use the Velcro straps and ties of the cover inside to secure it to the frame. Take the position of the KING BIRD logo as a reference and adjust the cover.

NOTE:

1. Horizontal Supports: All horizontal supports need to be assembled on the inner sides of the whole frame.
2. Vertical Supports: Poles #2 & #3 need to be assembled separately on the SAME side of the frame.
3. Diagonal Supports: Poles #6 need to be assembled between Horizontal Supports and Vertical Supports.
4. Cover: Unzip the doors before pulling the cover over the frame. If it is hard to zip up, please pull the cover on both sides of the door towards the middle as far as possible.

CARE & MAINTENANCE

For long-lasting durability and the best protection for your KING Bird Greenhouse, you may follow the care and maintenance instructions given below:

1. We suggest that the front of the greenhouse should NOT be placed to face the most frequent wind direction.
2. We suggest adding additional anchors (stakes, weights, screws, etc.), or use compost, manure, topsoil, bricks, etc. onto the extended sides to enhance the stability.
3. We suggest reducing the use during bad weather and placing it in a place which could keep out the wind.
